Release Notes

1. Introduction

The document communicates the major new features and changes in this release of the KenyaEMR. It also documents known problems and workarounds.

2. About This Release

This release contains Bug fixes features.

3. Compatible Products

This product has been tested on the following platforms or with the following products:

KenyaEMR on OpenMRS 3.x

This version works with DWAPI *latest* tag.

4. Upgrades

Refer to the upgrade user manual on how to upgrade your instance of KenyaEMR.

5. Main Feature

The following features have been included in this release:

Appointment Module

This package provides an enhancement to the appointment form which makes it possible to document appointments retrospectively. We introduced a new field to document **Date appointment issued** that should be the same as the **encounter date** as documented in the **green card**.

This change is particularly important because it fixes the drops in the TX CURR. For entries that were done retrospectively, the appointment that was documented most probably is not linked to the visit that the patient made and there is a need to do that by ensuring that the Date appointment issued is the same as the encounter date in the green card.

Optimization of IIT Risk Scores generation process reducing the amount out time the system takes to generate

Active Linelist added to capture the IIT risk scores and risk categories for each client since the IIT High Risk Report has been retired
Retired the Missed Appointment Report
Include the ability to add Radiology and Procedures to Order Basket
Include Contact Listing Feature
Add ability to autogenerate the KP Identifier

6. Bug Fixes.

Users are Unable to edit the KP Enrollment form. Which was failing with error
Fixed - Procedures Report Form does not Successfully Save and Close
Fixed - PNC Form does not save
Added restriction to require an active visit before launching billing form
Relaxed the ANC visit number Validation
Fixed - Error while submitting/saving Delivery Form
Remove the wrong validation on Clinical enrolment for Key populations
Fixed - Dual test should have 2 results HIV and syphilis but 3x has HIV alone
Fixed - MCH Antenatal Visit form still fails to save
Fix defaulter tracing form not launching on patient chart
Fix - The machine learning component used for eligibility screening assigns very high-risk score
Fix - HTS Eligibility Screening Form Location and Provider ID displays as UUID instead of names
Fix - HTS Eligibility Screening Form One Can Generate Risk Scores with only Population Type Field

Fix - When you register a client using Date Picker for date of birth, the system increments the DOB by 1 Month

Fix - PrEP Follow up Form STI Screening Section: Rename the header for Signs and Symptom as it currently Reads Genital Ulcer Disease (GUD)

Fix - Consider Relaxing the Automatically assigned status of Checked in on Appointment

Fix - Recreating DWAPI Tables Fails with Error: Column count doesn't match value count at row 1

Fix - Dual test should have 2 results HIV and syphilis but 3x has HIV alone

Fix - Inventory: Remove the Limit on user search under user roles

Fix - When doing the GBV screening form, if the patient is screened negative, the other option should have a type in for those clients who screen negative.
